

Soil lesson preparation

In preparation for your next lesson, you will need to **prepare a soil sample** from your growing site.

To do this...

Scrape away the surface leaf litter. Then take a trowels worth of soil (a good handful or 2) and put in a bag or Tupperware container, this will be used for the soil texture test. We will also need a small quantity of this to be dry for doing the pH tests, so put a little bit into a saucer and dry somewhere warm (windowsill, airing cupboard).

If you don't have any land yet, take a sample from anywhere.

Note down where you took the sample from.

Bring your samples to the next session.
